DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wolkowicz et al. (US Pat. No. 5,886,763).

3. In regard to claims 1-19, Wolkowicz et al. teach a switchable polarizer (13) for optical projection displays, said comprising: a first electrode (7); a second electrode (11); and a layer of liquid crystal material (9) positioned between the first and second electrodes; wherein the first and second electrodes conduct current to heat the polarizer (see col. 2, lines 1-12). Wolkowicz et al. also teach a heater for heating the liquid crystal layer, the heater including a heating conductive layer with first and second bus bars mounted thereon and each of the first and second bus bars including a metallic material that forms the majority of the bus bars, and a conductive protective coating on the metallic material (col. 2, lines 12). Wolkowicz et al. further teach that a heater for heating the liquid crystal layer, the heater being made by providing a conductive heating layer on a transparent substrate and adhering bus bars to the heating conductive layer by

way of flexible Z-axis conductive adhesive so as to reduce thermal stress included on solder connections between the bus bars and wires that are to be soldered thereto (col. 2, lines 23-30) and applying current or voltage to the bus bars so as to heat the heating conductive layer thereby heating the liquid crystal material (col. 6, lines 12-27). Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to configure a display device with a liquid crystal cell such that the display unit can be operated reliably and with only short switching times even in the case of high temperatures.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Brandt et al. are made of record to show a type of LCD with polarizer.
